Crystal Receivers Book

Experimental Crystal
Set Receivers Book,
Issues of Modern
Electrics from 1911
and 1912 provided the
Experimental

Department where letters from experimenters were
reprinted. Here you get the best of those letters.
Illustrations of a wide variety of make-shift equip-
ment that was being fabricated by impoverished
experimenters. This isn't so much about crystal set
circuits as it is about building the components
needed. You get ideas on building coherers, vari-
able and adjustable condensers, sliders for tuning
coils, making a universal detector, galena detec-
tors, and much more.

48 pages, #23276, New, \$6.95
